

GIRLS in ENGINEERING

Ever wonder what goes into designing and engineering a playground? Join us for a week this summer as we dive into the *engineering of FUN!* We will explore the many facets of engineering, design thinking, and real world problem-solving for a bioinspired climbing structure, complete with kid-powered generators, mechanisms, and more!

***GiE is open to all gender identities.**

Scholarships Available!

GiE awards scholarships based on financial need and actively recruits students from low socio-economic backgrounds and underrepresented minority groups. Apply today!

Camp Description

Students interested in participating in camp must apply! Campers explore a variety of STEM fields and careers in a small group setting, learn with peers with similar interests, meet inspiring mentors at various career stages, and get exposure to campus life. As such, we look for students with a strong interest in learning more about engineering and science, and who would benefit from an introductory STEM camp.
